

Medical emergencies can happen anywhere, anytime with anyone. It is better to be prepared!

This training prepares the participants to respond to life threatening emergencies such as Heart Attack, Cardiac Arrest, Stroke / Brain Attack and Choking as well as to commonly occurring everyday medical, trauma & environmental emergencies. The participants also learn to perform CPR and use an AED during a cardiac arrest.

Intended Audience

Everyone who wants to help people in case of a medical emergency by learning basic first aid techniques.

Course Material

CPR & First Aid Handout
